

### **Terra-Sorb Medium Hydrogel- 5 lb. box**

**\$26.00**

4443001

Terra-Sorb is a non-toxic hydrogel that holds hundreds of times its own weight in water, for gradual release into the root zone. Helps reduce watering frequency, and losses from drought and water stress. Ideal for non-irrigated flower beds, garden and ground covers.

The makers of this and other agents designed to retain water in the ground at root level use Yucca Cactus extract and application is not as long-lived as sodium bentonite.

Practical application of sodium

bentonite: <http://www.copper.org/applications/electrical/pq/casestudy/newrules.html>

A Patent has been granted for new radial algorithm replacing the FCC non-part 15 mandated minimum 120 1/4 wavelength radials with 110 20' overlapping connected radials that begin and terminate in a grounded collar surrounding the tower. It was tested against a highway system LPAM broadcasting at 530 with .1 watt, using 8 100 foot radials. The new system delivered 89% of the signal the radials did at one mile.
